

Reduce energy use and create happy tenants

Introducing the DTE Energy Multifamily Program

Making your building more energy efficient doesn't take a huge financial investment – but you'll see the financial benefits month after month. Energy-saving measures are a no-risk, low-cost way to save money, help your tenants and take care of the environment. If you're the owner of a multifamily property of five or more units in DTE Energy's service territory, the Multifamily Program can help.

For individual tenant-controlled units, DTE Energy will install the following energy-saving upgrades at no cost:

- ENERGY STAR® compact fluorescent light bulbs (CFLs), which use up to 75 percent less energy than incandescent bulbs
- Low-flow showerheads and faucet aerators
- Hot water pipe insulation

In common areas, DTE Energy offers substantial incentives for the following energy-efficient measures*:

- Lighting - exit signs, sensors, hallway & stairwell lighting, exterior & parking lot light fixtures
- HVAC - boiler upgrades and controls
- Motors and drives

To find out which incentives your property qualifies for, contact DTE Energy for a free, no-obligation walkthrough energy audit.
